Textbook

Weather and Climate Laboratory Manual, ISBN: 978-1-4652-5717-8

Corrections and Adjustments

Because the lab manual is in its first edition, it has some errors. I will post corrections and adjustments for every lab on my website. **Always** read the corrections as you do the lab.

Although the files are posted on my website, they still have data from last semester. I reserve the right to make changes until before lab begins.

How to get an A:

- Attend all lab classes
- Notify me far ahead of time if you believe you have a valid excuse for missing a class
- Be on time to hear initial instructions, hints, and adjustments. I won't repeat directions over again to every person that walks in late.
- Follow directions along with my provided corrections and read each question carefully
- Turn in high-quality, neat work

Materials

Please bring a TI calculator to class. You will be doing calculations frequently.
