

**Air Masses
AOSC 200
Tim Canty**

Class Web Site: <http://www.atmos.umd.edu/~tcanty/aosc200>

Topics for today:

**Air Masses
Fronts**

**Lecture 20
Nov 5 2019**

Air Masses

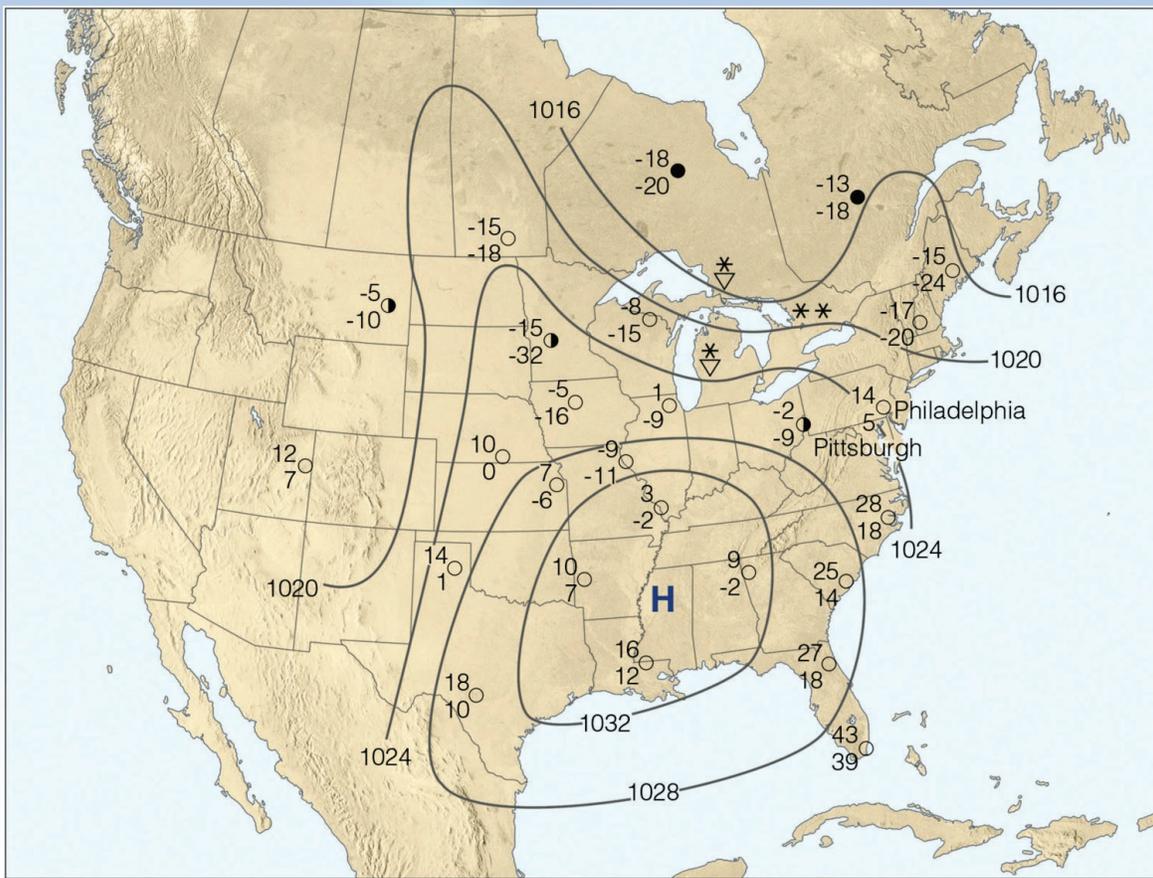

What is an air mass?

**Large body of air whose temperature and humidity
are the same in any horizontal direction**

Can cover huge areas (hundreds of thousands sq mi)

**Influenced by the surface over which they form
(source region)**

**Longer the air stays over source region the more it
takes on characteristics of that region**

Air Mass Source Regions

TABLE 8.1 Air Mass Classification and Characteristics

SOURCE REGION	ARCTIC REGION (A)	POLAR (P)	TROPICAL (T)
<i>Land</i>	<i>cA</i>	<i>cP</i>	<i>cT</i>
Continental (c)	extremely cold, dry, stable; ice- and snow-covered surface	cold, dry, stable	hot, dry, stable air aloft; unstable surface air
<i>Water</i>		<i>mP</i>	<i>mT</i>
Maritime (m)		cool, moist, unstable	warm, moist; usually unstable

**Remember: Continental = dry
Maritime = moist**

**First letter: surface category
Second letter: location category**

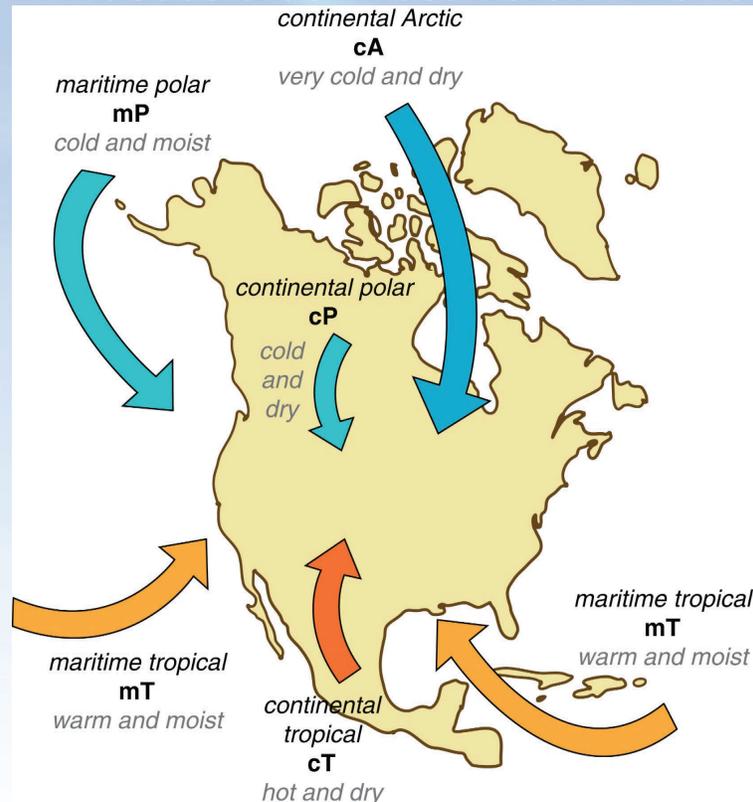

cT = continental Tropical

Fig 10.1 *Weather: A Concise Introduction*

Continental Polar (cP) and Continental Arctic (cA) Air

Cold to extremely cold and dry air masses

cP air comes from Canada and can head as far south as Florida

cA forms over frozen Arctic bringing bitterly cold temperatures

Sometimes called “Siberian Express”

Strong winds and blowing snow can lead to blizzards

Maritime Polar Air (mP)

Form over oceans at high latitudes, cool to cold and humid

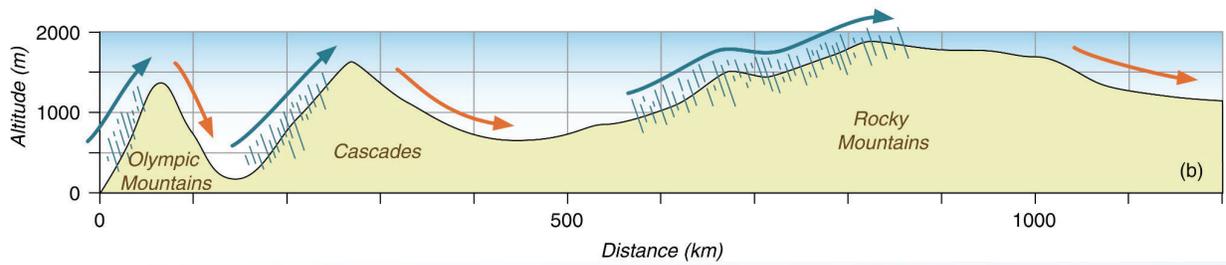

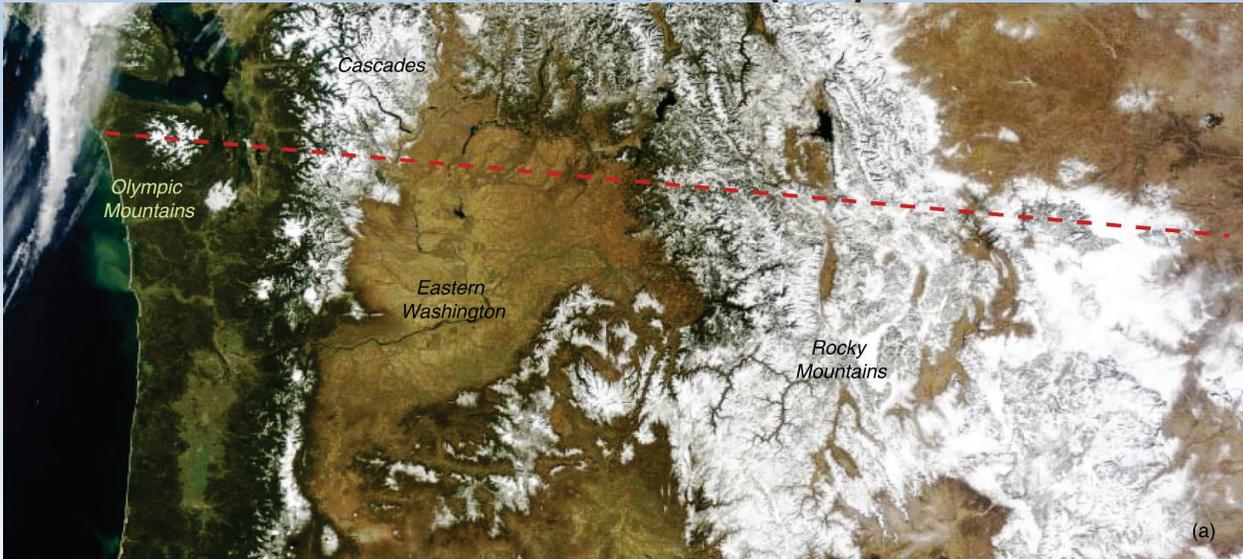

In winter, mP from Pacific begin as cP from Siberia

These systems run into west coast mountains and dump lots of snow (orographic forcing)

On East coast, mP brings in moist air from Atlantic over land where it meets with cP air

Can lead to large snowfalls!!!

Maritime Tropical Air (mT)

Eastern U.S. strongly affected by mT air that forms over Gulf of Mexico, Caribbean Sea, and subtropical western Atlantic Ocean

Stable air mass leads to oppressive heat wave

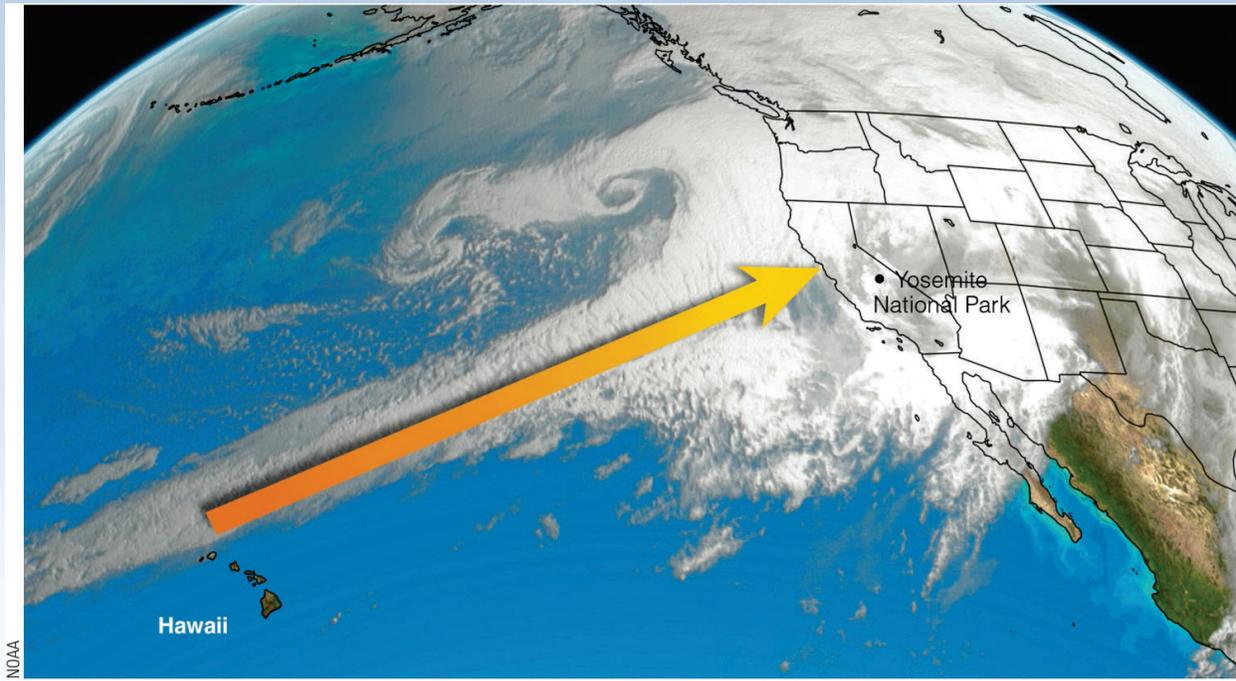

Wintertime precipitation over Central and Eastern U.S. due to uplift of mT air over cold air masses

Western U.S. strongly affected by mT air from Pacific

15

Continental Tropical Air (cT)

Form over tropical and subtropical deserts and plateaus

In North America, formed in southwest and N. Mexico

Air mass is hot and dry

When cT and mT air meet, contrast between systems is called the “dry line”

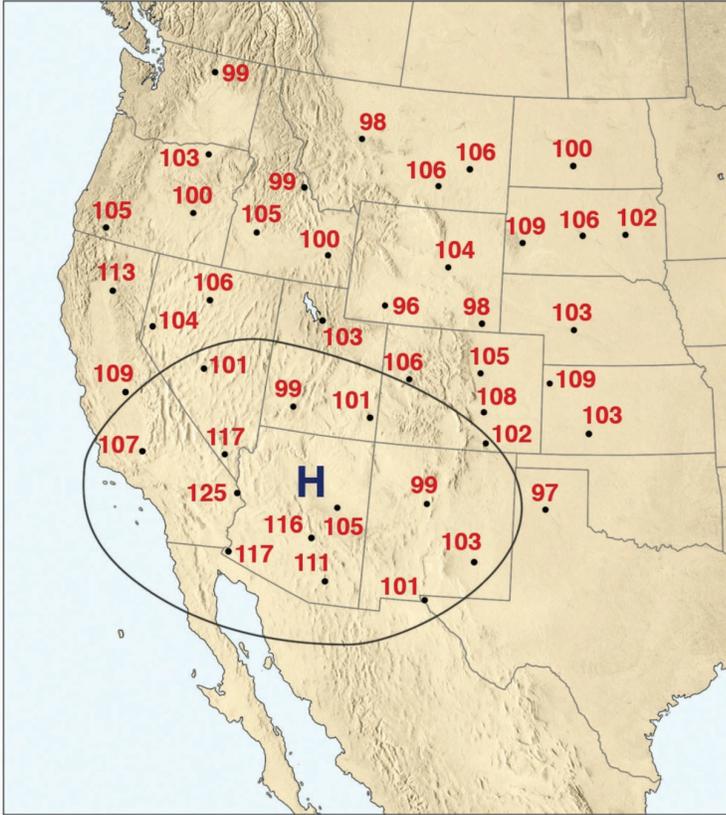

In summer, large supercell storms often form at dry line, conducive to tornado development

Cold Fronts

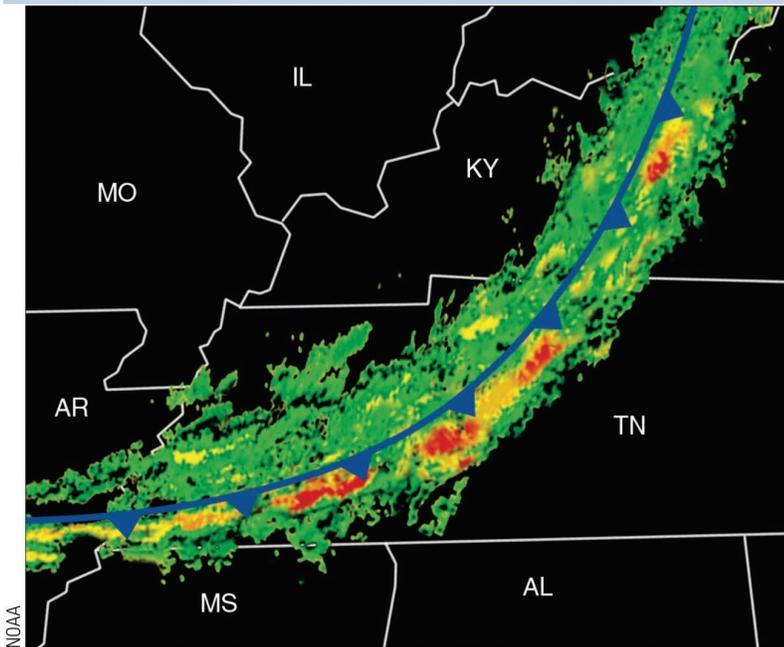

© Cengage Learning. All Rights Reserved.

Represented as blue triangles pointing toward warm air

Travels ~25 knots

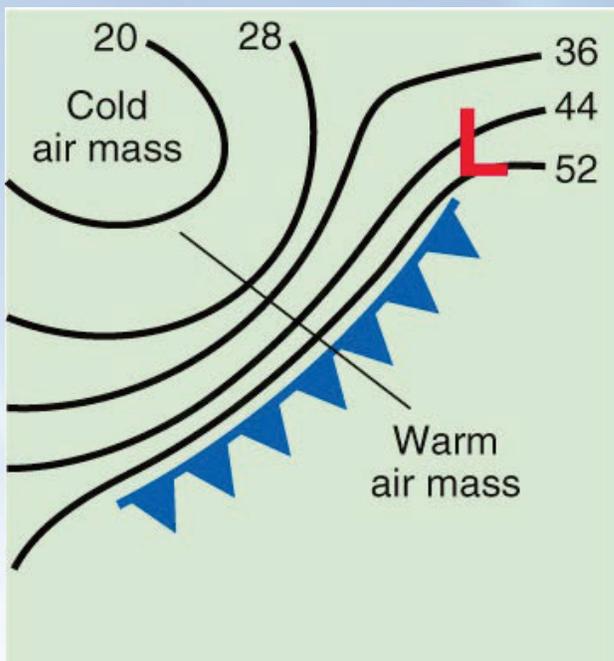

Warm air forced up, cools, releases latent heat, leads to storms

Copyright © 2019 University of Maryland

This material may not be reproduced or redistributed, in whole or in part, without written permission from Tim Canty

Fig 8.17: *Essentials of Meteorology*

Cold Fronts

As cold front moves through, temps. hold steady then drop

Copyright © 2019 University of Maryland

This material may not be reproduced or redistributed, in whole or in part, without written permission from Tim Canty

Fig 9-13 *Meteorology: Understanding the Atmosphere*

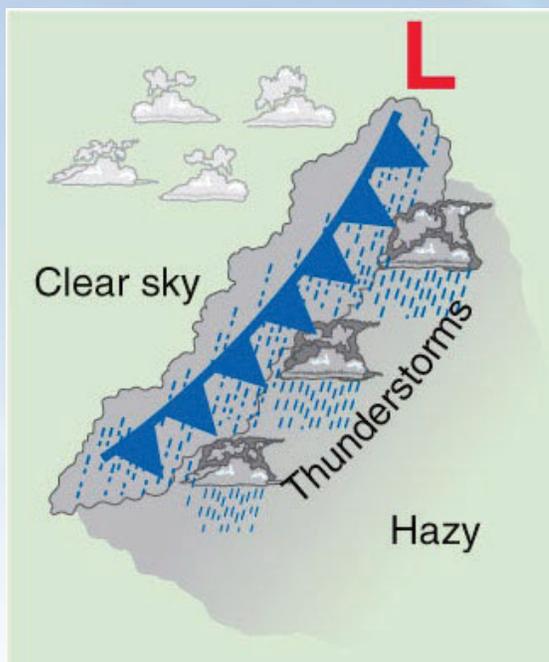

Cold Fronts

As cold front moves through, temps. hold steady then drop

Pressure drops then rises after front passes

Cold Fronts

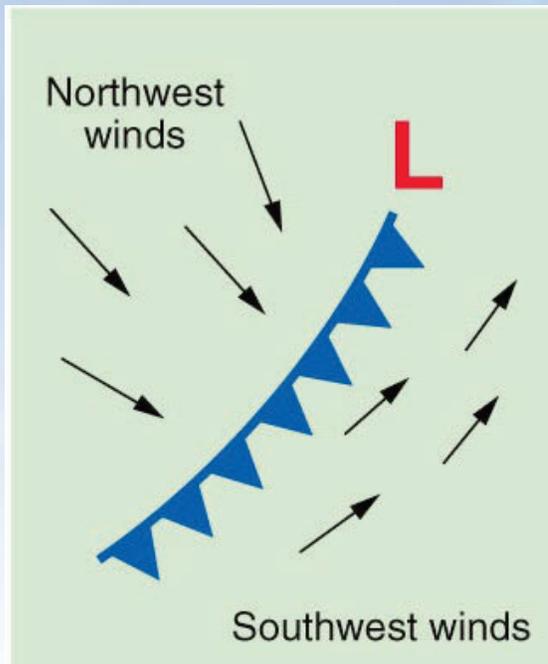

As cold front moves through, temps. hold steady then drop

Pressure drops then rises after front passes

Precipitation forms along leading edge of front, "squall line"

Cold Fronts

As cold front moves through, temps. hold steady then drop

Pressure drops then rises after front passes

Precipitation forms along leading edge of front, “squall line”

Winds shift from southwest to northwest

Cold fronts generally move to the south, southeast, or east

Fig 9-13 *Meteorology: Understanding the Atmosphere*

Cold Fronts

TABLE 8.2 Typical Weather Conditions Associated with a Cold Front in Winter in the Northern Hemisphere

WEATHER ELEMENT	BEFORE PASSING	WHILE PASSING	AFTER PASSING
Winds	South or southwest	Gusty, shifting	West or northwest
Temperature	Warm	Sudden drop	Steadily dropping
Pressure	Falling steadily	Minimum, then sharp rise	Rising steadily
Clouds	Increasing Ci, Cs, then either Tcu* or Cb*	Tcu or Cb	Often Cu, Sc* when ground is warm
Precipitation	Short period of showers	Heavy showers of rain or snow, sometimes with hail, thunder, and lightning	Decreasing intensity of showers, then clearing
Visibility	Fair to poor in haze	Poor, followed by improving	Good, except in showers
Dew point	High; remains steady	Sharp drop	Lowering

*Tcu stands for towering cumulus, such as cumulus congestus; whereas Cb stands for cumulonimbus. Sc stands for stratocumulus.

Warm Fronts

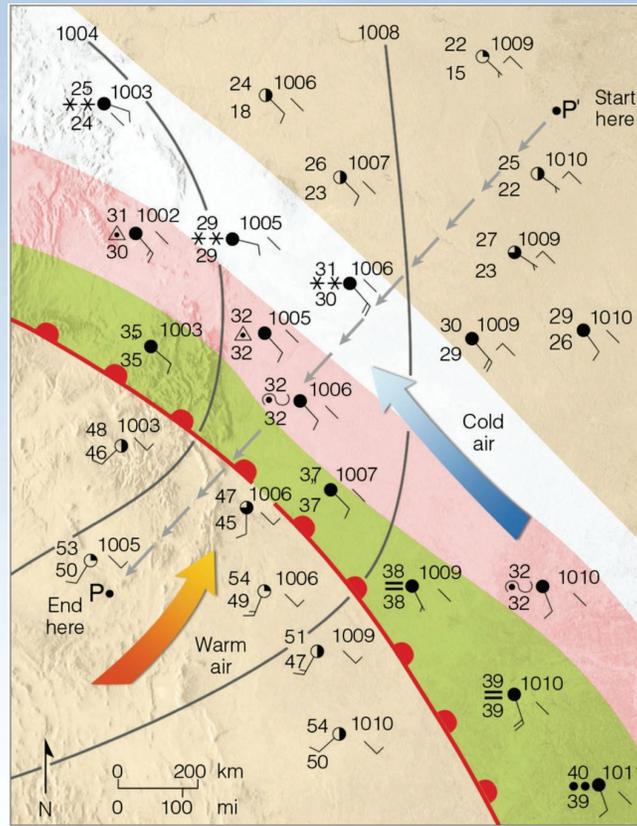

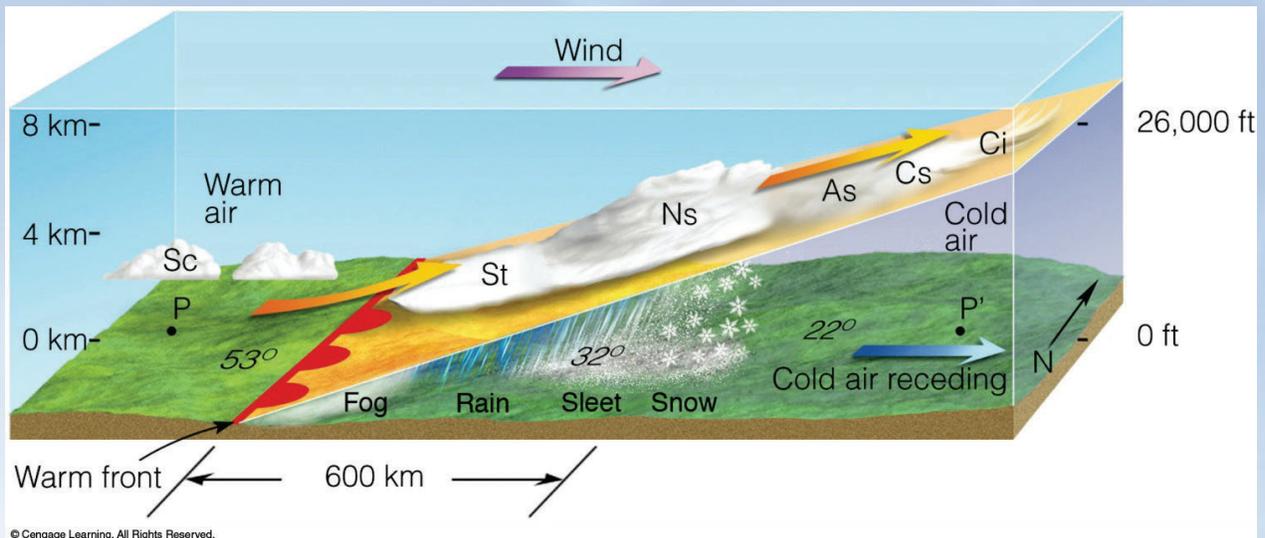

Fig 8.19: Essentials of Meteorology

Warm Fronts

© Cengage Learning. All Rights Reserved.

Represented as red semi-circles pointing toward cold air

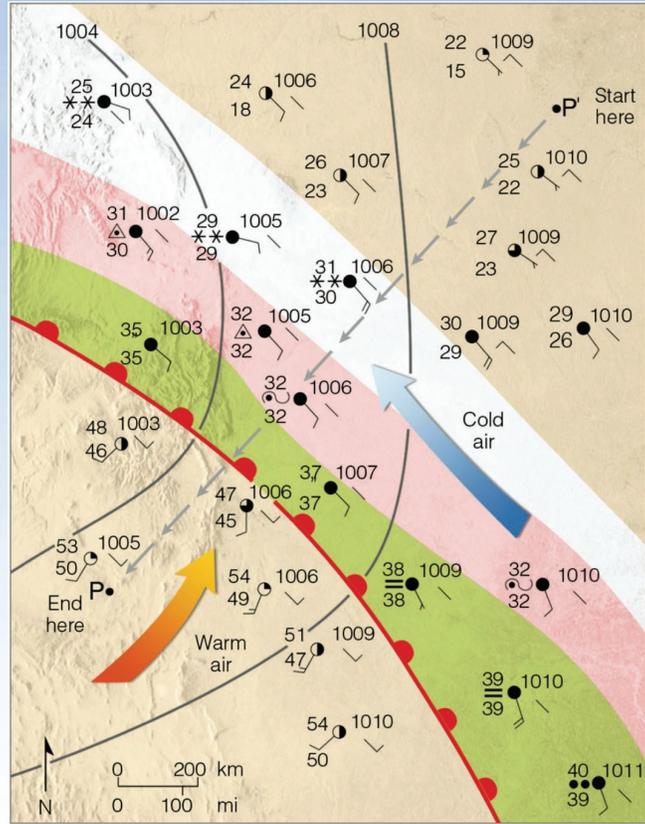

Travels ~10 knots

Warm air slides over cold air and slowly cools.

Clouds form starting with cirrus, then various layers of stratus

Fig 8.20: Essentials of Meteorology

Warm Fronts

Warm Fronts

TABLE 8.3 Typical Weather Conditions Associated with a Warm Front in the Northern Hemisphere

WEATHER ELEMENT	BEFORE PASSING	WHILE PASSING	AFTER PASSING
Winds	South or southeast	Variable	South or southwest
Temperature	Cool to cold, slow warming	Steady rise	Warmer, then steady
Pressure	Usually falling	Leveling off	Slight rise, followed by fall
Clouds	In this order: Ci, Cs, As, Ns, St, and fog; occasionally Cb in summer	Stratus-type	Clearing with scattered Sc, especially in summer; occasionally Cb in summer
Precipitation	Light-to-moderate rain, snow, sleet, or drizzle; showers in summer	Drizzle or none	Usually none; sometimes light rain or showers
Visibility	Poor	Poor, but improving	Fair in haze
Dew point	Steady rise	Steady	Rise, then steady

Occluded Fronts (cold type occlusion)

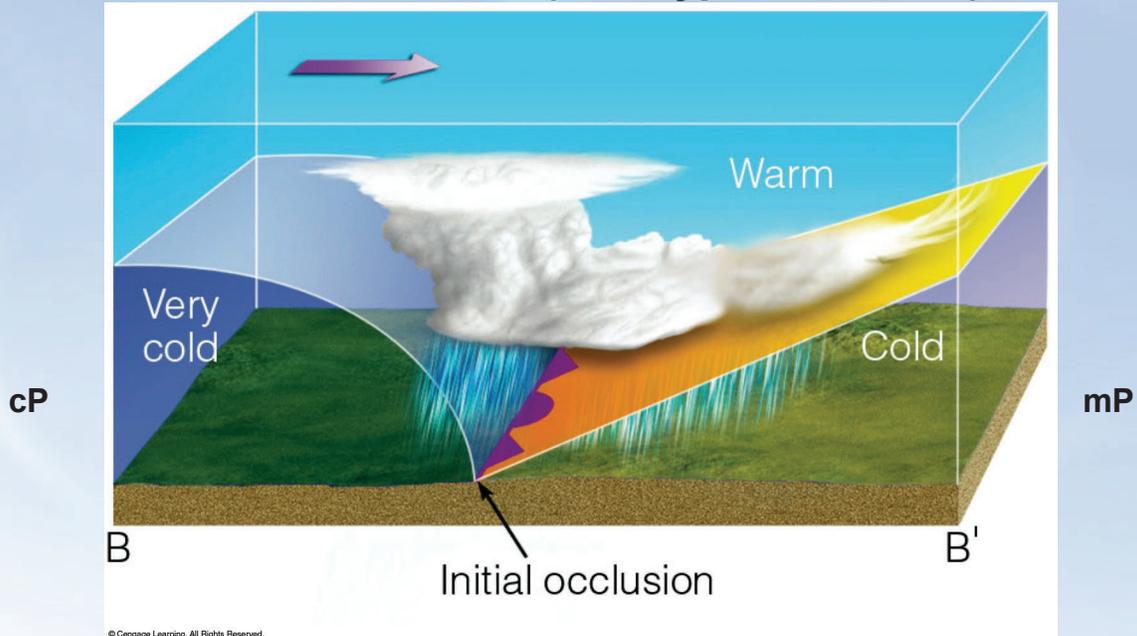

- Cold front moves faster than warm front, may catch warm front**
- Warm air is forced up over both cold/very cold air masses**
- May have mix of clouds similar to both cold and warm fronts**

Occluded Fronts

TABLE 8.4 Typical Winter Weather Most Often Associated with Occluded Fronts in North America

WEATHER ELEMENT	BEFORE PASSING	WHILE PASSING	AFTER PASSING
Winds	East, southeast, or south	Variable	West or northwest
Temperature			
(a) Cold-type occluded	Cold or cool	Dropping	Colder
(b) Warm-type occluded	Cold	Rising	Milder
Pressure	Usually falling	Low point	Usually rising
Clouds	In this order: Ci, Cs, As, Ns	Ns, sometimes Tcu and Cb	Ns, As, or scattered Cu
Precipitation	Light, moderate, or heavy precipitation	Light, moderate, or heavy continuous precipitation or showers	Light-to-moderate precipitation followed by general clearing
Visibility	Poor in precipitation	Poor in precipitation	Improving
Dew point	Steady	Usually slight drop, especially if cold-occluded	Slight drop, although may rise a bit if warm-occluded
