Supplement of

Contrasting the effect of aerosol properties on the planetary boundary layer height in Beijing and Nanjing

Figure S1. Locations of the two sampling sites in this study.

Figure S2. Time series of PM$_{2.5}$ mass concentration in Beijing in November 2018. Red rectangles outline three heavy pollution episodes.
**Figure S3.** Same as Fig. 2 but for PM$_{2.5}$.

**Figure S4.** Density diagrams of the relationships between PBLH and PM$_{2.5}$ mass concentration in (a) spring, (b) summer, (c) autumn, and (d) winter in Nanjing. The color of the dot represents the probability, and red lines are fitted lines through the data. Linear relations and correlation coefficients are given in each panel.
Figure S5. Same as Figure S4 but in Beijing.
